

Can I change the wheel size on my Catrike?

- All Catrike models are designed with a specific wheel size to optimize riding characteristics including weight distribution, braking dynamics, and cornering ability. Changes to the wheel size will greatly affect the riding quality.

If you would like to upgrade your wheels, we recommend staying with the same diameter rims. Tire selection can be changed and depending on the terrain, will have much less effect on your riding experience.

Catrike can not guarantee the performance of your trike when after-market parts or components are installed. Some modifications may affect the manufacturer's warranty.
