

## Where is the serial number located on my Catrike?

- To determine the manufacture year of a Catrike, you need the serial number. Trikes manufactured before 2013 have a decal on the bottom of the main frame tube with the serial number on it. It is a combination of three letters and up to four numbers. **(i.e. CTV1203 for Villager 1203)**

Trikes manufactured after 2013 have the serial number engraved on the main frame tube. Space frames (700, Expedition, Pocket and Eola) have the serial number engraved on the bottom of the main frame tube towards the rear. Trikes with an adjustable seat have the serial number engraved on top of the main frame tube towards the rear. You will have to fold the seat all the way forward to be able to see the serial number. The serial number is a combination of five numbers. **(i.e. 34881)**

Some serial numbers can be hard to read if the powder coat finish filled the engraved numbers. A flashlight angled from the side might help make it easier to read.
